

Five behavioral health disorders—autism spectrum disorder, attention deficit-hyperactivity disorder, bipolar disorder, major depressive disorder, and schizophrenia—have genetic similarities. People with any of the five disorders are more likely to have genetic variation at the same four chromosomal sites. Previously, evidence for such genetic overlap had been limited to pairs of behavioral health disorders, such as schizophrenia and bipolar disorder, autism and schizophrenia, or depression and bipolar disorder...

Im Glad Im Your Grandma, Birds and Bird Finding in the Saginaw Bay Area (Dr. Ormond E. Barstow natural history field guide series), Groundwater Geomorphology: The Role of Subsurface Water in Earth-Surface Processes and Landforms (Special Paper (Geological Society of America)), From Infrastructure to Services: Trends in Monitoring Sustainable Water, Sanitation and Hygiene Services, Meg Mackintosh And The Mystery On Main Street (Turtleback School & Library Binding Edition) (Solve-It-Yourself Mystery),
