

# Fractal Image Compression: Theory and Application (Inquiries in Social Construction)

One half of the book is authored by Yuval Fisher himself, while articles from another 12 experts in the field present material from different points of view. The focus here is solely on fractal image encoding, with the aim of providing a working code that is usable in applications, while containing the complete details of how to encode and decode images. An indispensable how to guide, combining the very latest results in the field. Of interest to a very wide audience, ranging from experts in image processing to high school students.
