

Galois Algebras and Their Representations

This book provides a comprehensive overview of the theory of Galois algebras and their representations developed by the authors. It gives a unique treatment of the theory of Gelfand-Tsetlin modules for finite W -algebras, including the universal enveloping algebra of $\mathfrak{gl}(n)$, a new treatment of an analog of the Gelfand-Kirillov Conjecture for finite W -algebras, and a description of important new theory of Galois algebras. This book will be of interests to those who specialize in Lie theory, Representation theory and Ring theory.
