

Introduction to the TI-92: 37 Experiments in Precalculus and Calculus

Teachers will find 37 ready-made lessons. Topics include: symmetry of 2-D graphs and inverse functions, 2-D graphs of rational functions, 2-D parametric graphs, limits and derivatives, conic sections, systems of equations with linear and quadratic combinations, and integrals. Applications are in: area between curves, average value of functions, arc length, and a thorough beginning with 3-D graphs. Selected answers included.
