

Sheaves on Manifolds: With a Short History. «Les debuts de la theorie des faisceaux». By Christian Houzel (Grundlehren der mathematischen Wissenschaften)

Sheaf Theory is modern, active field of mathematics at the intersection of algebraic topology, algebraic geometry and partial differential equations. This volume offers a comprehensive and self-contained treatment of Sheaf Theory from the basis up, with emphasis on the microlocal point of view. From the reviews: Clearly and precisely written, and contains many interesting ideas: it describes a whole, largely new branch of mathematics. Bulletin of the L.M.S.
